

Outstanding System Bug within Version 4.3.1.2:

Comments on Outstanding System Bugs – *The current identified system bugs that could impact your practice are as follows:*

- **HDWY-174 –Opting In Opted Out Patient-** *a new functionality of the upgrade relates to the ability to “opt-out” a patient that may have already been in the system, and then recall them based on an anonymous identifier, and then opt them back into the system, thereby restoring their demographic information, if desired by the patient. The current version allows you to opt the patient out, but not opt them back in. This bug is slated to be fixed in the V4.4.1 upgrade.*

Change Requests Pending to Immunization Registry (all in development by STC):

None currently pending that will affect users of system directly.
